Abstract

Manuscripts, as living and dynamic objects representing different dimensions of life in the past, are a valuable heritage and one of the most important ways to perceive and preserve the culture and identity of any nation. In addition to smoothing the path for research, introducing these works will perpetuate and transfer them to future generations. Accordingly, one of the influential medical manuscripts of the Indian subcontinent under the title of *Takmila Hindi* is introduced in this research. The current research is a descriptive-analytical method with a library approach, which was conducted based on the only manuscript *Takmila Hindi* available in Iran. Ḥakīm Ahlullāh Dehlawī is one of the scientists and physicians of the 12th century AH, who, in addition to medical works, also has writings in the field of jurisprudence, beliefs and conduct. *Takmila Hindi* is one of the most important medical works of this author in Persian language. This book includes an introduction, description of 158 monographs, description of diseases and treatments in 22 chapters, and a list of contents at the end of the book. In addition to introduction of the Indian school of medicine, approved medicines and the use of some Indian terms and weights and quantities have been discussed in this book.

Keywords: History of Medicine, Medical manuscript, Pharmacology, Therapeutics
